AccelOps Names Former SAP Executive Dan Maloney as Vice President of Marketing and Business Development

Experienced marketing and business development veteran joins integrated data center monitoring leader

SANTA CLARA, Calif. - Aug. 13, 2013 - AccelOps, Inc., the leader in integrated Security Information and Event Management (SIEM), performance and availability monitoring for on-premise and cloud-based data centers, announced today that it has hired Dan Maloney, a former SAP executive, as vice president of marketing and business development.

"We are delighted to have an executive of Dan's caliber join the AccelOps team," said Flint Brenton, AccelOps president and CEO. "He brings a wealth of experience in working with cloud and mobile applications and infrastructure, as well as a deep understanding of analytics and real-time insights, which will serve him well in his new role."

Maloney has nearly 20 years of experience in the enterprise software arena. He comes to AccelOps after serving as general manager and global vice president for eCommerce at SAP, where he was responsible for global strategy, sales and marketing of mobile, cloud, analytics, database and technology solutions from SAP and its partners.

Maloney was at SAP for 12 years, where he held a variety of leadership roles, including global vice president of business development, where he focused on selecting, structuring and enabling SAP's partnerships for cloud, mobility and traditional on-premise software. He also served as vice president of strategy and COO for the SAP ecosystem.

Prior to SAP, he worked at TopTier Software, Perot Systems and HSO Business Systems. Maloney holds a B.S. in management science from Virginia Polytechnic Institute and State University.

"AccelOps is leading the way in helping organizations analyze their machine data and correlate relevant events and patterns to gain deep insights into their cloud and IT operations like never before," Maloney said. "AccelOps has a great team in place. I'm looking forward to building on the company's success and continuing to deliver incredible value to our customers."

About AccelOps

AccelOps provides a new generation of integrated security, performance and availability monitoring software for today's dynamic, virtualized data centers. Based on patented distributed

real-time analytics technology, AccelOps automatically analyzes and makes sense of behavior patterns spanning servers, storage, networks, security, users, and applications to rapidly detect and resolve problems. AccelOps works across traditional data centers as well as private and hybrid clouds. The software-only application runs on a VMware ESX or ESXi virtual appliance and scales seamlessly by adding additional VMs to a cluster. Its unmatched delivery of real-time, proactive security and operational intelligence allows organizations to be more responsive and competitive as they expand the IT capabilities that underpin their business.
