AccelOps Recognized for Comprehensive View of Virtualized Infrastructure and Cloud Security Expertise

AccelOps a finalist in Storage, Virtualization, Cloud (SVC) Awards for virtualized IT infrastructure management

SANTA CLARA, Calif. – Nov. 6, 2013 - AccelOps' analytics-driven IT operations management software for cloud and virtualized infrastructures has been shortlisted for the 2013 Storage, Virtualization, Cloud (SVC) Awards as a finalist in the Cloud Security Product of the Year category.

The SVC awards recognize the achievements of EMEA end users, channel partners and vendors who are driving innovation across the cloud, virtualization and storage sectors over the past year. Reaching the finalist stage is evidence of AccelOps' market-leading software that discovers, analyzes and correlates log data, spotlights potential problems and generates real-time alerts in cloud infrastructures, as well as across traditional data centers.

AccelOps delivers the industry's only integrated software platform to monitor security, performance and availability across all aspects of the IT infrastructure. Using patented distributed real-time analytics technology, AccelOps discovers and automatically analyzes and interprets behavior patterns across servers, storage, networks, security, users and applications to detect and resolve problems quickly. The AccelOps virtual appliance software manages security, network performance and compliance, all on a single screen.

"We're delighted to be honored as an SVC finalist," said Flint Brenton, AccelOps president and CEO. "While our customers already recognize the many advantages of AccelOps' cloud security solution, it is gratifying to receive this industry acknowledgment of the value of our world-class IT operations management software to deliver a solid return on investment for cloud-based data centers of all sizes."

The SVC Awards Gala will take place Nov. 21, 2013, at the Jumeirah Carlton Tower in Knightsbridge, London. For details, visit <http://www.svcawards.com/2013>.

About AccelOps

AccelOps provides analytics-driven IT Operations Management for cloud and virtualized infrastructures. The virtual appliance software manages security, network performance and

compliance, all on a single screen. AccelOps automatically discovers, analyzes and automates IT issues in machine and big data across organizations' data centers and cloud resources, spanning servers, storage, networks, security, applications and users. AccelOps' patented analytics engine with cross-correlation sends real-time alerts when deviations occur that indicate a security or performance-impacting event. The AccelOps platform scales seamlessly and provides unmatched delivery of proactive security and operational intelligence, allowing organizations to be more responsive and competitive as they expand their IT capabilities.
